

As a member of a Patient Insights Network, you are contributing your information to help increase our knowledge and improve patient care!

Now, there is an easy way to make your data work even harder to help researchers.

ClinGen, an NIH-funded resource, is working to understand the relationship between genetics and health to improve patient care and research. This effort relies on gathering more information through data sharing.

Your Patient Insights Network is working with ClinGen to help people like you share their genetic and health information.

## Data sharing can ...

Help us better understand genetic changes and can help others get clearer genetic test results

Increase our understanding of a condition's features, which may help identify possible interventions and treatments

Give you the option to receive updates about your genetic test results
